For this new year 2020 we thank you for your loyalty, PALEXPO will be providing you with the new Wi-Fi 6 service (802.11ax standard).

This new standard will bring you better connectivity and increased performance while in high density areas across the site.

Recent mobile terminals are certified to the AX standard and in principle all mobile terminals are compatible. However, if you have a Windows terminal (2018 or before) equipped with an INTEL chip, you will probably need to update the network card driver, this is very important.

Please view the below link if you are required to make an update.

https://www.intel.com/content/www/us/en/support/articles/000054799/network-and-io/wireless-networking.html

We look forward to your visit within our walls to share this new Wi-Fi 6 experience!
